

# P-LOCK

The valves on urinals are made of brass and weigh several pounds. At four to five dollars a pound, thieves are finding it easy to remove this brass valve and sell it for scrap brass. This brass part can cost the victim up to three hundred dollars to replace, not to mention the inconvenience of an inoperable toilet.

The P-LOCK comes with a tamper resistant lock that uses a special triangular shape key. It can also be used with just about any padlock.
